DETAILED ACTION

Specification

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- 3. Claims 1-4 are rejected under 35 U.S.C. 102(a) as being anticipated by Janssen et al US 6,613,607 B2.

The Janssen et al. reference discloses, in fig. 9, e.g., a method of producing individual integrated circuit package units, comprising:

providing a base 1 which includes a leadframe and a plurality of package precursors formed on said leadframe, each of said package precursors having inner leads (of lead 4) and a semiconductor chip 2 connected electrically to said inner leads (by wire 3), said leadframe having a plurality of metallic connection bars extending along borderlines of said package precursors, and extension parts branching from two sides of said connection bars (the outer part of lead 4), said extension parts being formed integrally with said connection bars and being connected respectively and

Art Unit: 2823

directly to said inner leads (of lead 4) of said package precursors, said extension parts being spaced apart from each other, said base further having a continuous encapsulating epoxy layer 8 that encloses said semiconductor chips of said package precursors and that are bonded integrally with said leadframe; and

singulating said package precursors by cutting said leadframe and said encapsulating epoxy layer along first and second cutting streets 16 which extend respectively along and at two opposite sides of said connection bars and which extend through said extension parts, wherein the cutting of said base is performed by cutting into said first and second cutting streets with a cutting tool, thereby separating said connection bars from said inner leads, col. 5, lines 32-39.

Said package precursors are arranged in a grid-like array, said connection bars intersecting each other, figs 1, 6, 7 and 9. Said cutting tool is a single blade cutting tool or a dual-blade cutting tool, col. 5, lines 32-39.

Conclusion

- 4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
- 5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thanh V. Pham whose telephone number is 571-272-1866. The examiner can normally be reached on M-Th (6:30-5:00).

Application/Control Number: 10/646,154
